Approved by Bob Example (assessor) on 26.10.2026. The approval covers these inputs (input hash 7bda1bf4aa5a0c9e).

TERMS OF THIS FRAMEWORK

Control ids and titles only; consult ISA/IEC 62443-4-2 for the requirements. A verdict here is a projection of this assessment, not a certification.

Licence: IEC copyright. Control ids and the requirement titles the packs cite only; no clause text.

Standard · IEC · Source

Content as of 2026-09-26

Level: All levels

130 controls: 8 addressed in full, 0 addressed in part, 0 not applicable, 54 not addressed, 68 not judgeable

☐ Not addressed	This catalog maps countermeasures to this row, and none of the risks they cover has an assigned mitigation.
⬚ Cannot be judged	Nothing in this assessment can evidence this row, so no verdict is possible — see the reason on the row.
◩ Partial	Some of the risks this row covers have an assigned mitigation.
■ Addressed	Every risk this row covers has an assigned mitigation; a row judged from questions has every bound question answered, and all answer yes; a row judged from documentation reads a field that holds what the obligation asks for.

Catalog content and licence

This describes the catalog pack as a whole, including changes made in versions later than the ones this report was computed against. Those versions are listed below.

Catalog content of "Standard"

Modifications: The upstream spreadsheet workbook (version 1.1.2) was imported into relational catalogs (questions, damage scenarios, attack steps, assumptions, countermeasures and standards) for use in this application, and its content was changed. Added: 28 questions (23 asked, 5 headings), 11 damage scenarios, 2 attack steps, 2 assumptions and 6 countermeasures; 18 attack steps read the added questions and two of them gain a trigger; 16 countermeasure-to-step links. Rewritten: 51 countermeasure descriptions (38 upstream references replaced by authored text, 13 upstream texts extended or reworded); 1 description added where upstream had none; the organisation placeholder has been made dynamic; the elapsed-time scale follows CEM v3.1 revision 5 with seven options (AS41's estimate is labelled ≤ three months); the first stakeholder and the stakeholder names of 16 assumptions are the organisation placeholder. Restored as framework bindings: the attack-step mappings to the CRA (24 attack steps, 33 letters). The help texts of the personal-data questions QI2 and QI11 are filed under the option each explains (only their keys moved). The lowest risk level is renamed 'Negligible' (formerly 'No Risk').
Warranty: Unless required by applicable law or agreed to in writing, the licensor provides the work "as is", without warranties of any kind.
