Approved by Bob Example (assessor) on 26.10.2026. The approval covers these inputs (input hash 7bda1bf4aa5a0c9e).

TERMS OF THIS FRAMEWORK

CEN and CENELEC neither endorse nor have reviewed this mapping. A verdict here is a projection of this assessment that supports the manufacturer's technical documentation; it is not a presumption of conformity: the sections of each standard named "rationale" and "guidance" confer none (Implementing Decision (EU) 2025/138), and a control marked Restricted carries the further restriction named on it. Scope of this version: EN 18031-1 (Article 3(3)(d)) and EN 18031-2 (Article 3(3)(e)) for internet-connected radio equipment. EN 18031-3 (Article 3(3)(f), equipment that transfers money, monetary value or virtual currency) is out of scope; such equipment needs a separate assessment. Within EN 18031-2, only equipment processing personal data is judged; the toy, childcare and wearable clauses, and traffic and location data, are out of scope because the questionnaire does not ask about them. Applicability is decided by the answers: QA5 (wireless connections) with QA6 or QA10b (internet connection) for Part 1, and QI2 (personal data) in addition for Part 2. QA5 asks about wireless connections more broadly than radio equipment, so the product's radio role decides whether this framework applies. Each requirement shows the EN IEC 62443-4-2:2019 requirements its part's informative Annex B names; these links are shown and never change a verdict. It applies to radio equipment placed on the market between 1 August 2025 and 10 December 2027; Delegated Regulation (EU) 2022/30 is repealed with effect from 11 December 2027 (Delegated Regulation (EU) 2026/339).

Licence: Control ids only: the requirement codes of EN 18031-1:2024 and EN 18031-2:2024 (for example ACM-1) and, in the restriction notes, the clause numbers the Official Journal names. None of the standards' text is reproduced. The restriction and validity wording is that of the Official Journal acts cited. No licence finding on reproducing the text exists; until one does, ids only.

Harmonised standards (transitional) · CEN and CENELEC (the standards); European Commission (the citation) · Source

Valid from 2025-08-01 until 2027-12-10 · Delegated Regulation (EU) 2022/30, applicable from 1 August 2025, repealed by Delegated Regulation (EU) 2026/339 Art. 1 with effect from 11 December 2027
Radio equipment placed on the Union market between 1 August 2025 and 10 December 2027 stays subject to Article 3(3)(d), (e), (f) of Directive 2014/53/EU, and to market surveillance on that basis after the repeal (recital 5 of Regulation (EU) 2026/339). The trigger is the date of placing on the market, not design, manufacture or shipment.

Content as of 2026-10-03

72 controls: 0 addressed in full, 2 addressed in part, 0 not applicable, 46 not addressed, 24 not judgeable

☐ Not addressed	This catalog maps countermeasures to this row, and none of the risks they cover has an assigned mitigation.
◩ Partial	Some of the risks this row covers have an assigned mitigation.
⬚ Cannot be judged	Nothing in this assessment can evidence this row, so no verdict is possible — see the reason on the row.
■ Addressed	Every risk this row covers has an assigned mitigation; a row judged from questions has every bound question answered, and all answer yes; a row judged from documentation reads a field that holds what the obligation asks for.

Catalog content and licence

This describes the catalog pack as a whole, including changes made in versions later than the ones this report was computed against. Those versions are listed below.

Catalog content of "Standard"
Creator: Fraunhofer-Institut für Angewandte und Integrierte Sicherheit AISEC and SICK AG
Copyright: QuBA-libre is Copyright (c) by Fraunhofer-Institut für Angewandte und Integrierte Sicherheit AISEC and SICK AG. All Rights Reserved.

Modifications: The upstream spreadsheet workbook (version 1.1.2) was imported into relational catalogs (questions, damage scenarios, attack steps, assumptions, countermeasures and standards) for use in this application, and its content was changed. Added: 28 questions (23 asked, 5 headings), 11 damage scenarios, 2 attack steps, 2 assumptions and 6 countermeasures; 18 attack steps read the added questions and two of them gain a trigger; 16 countermeasure-to-step links. Rewritten: 51 countermeasure descriptions (38 upstream references replaced by authored text, 13 upstream texts extended or reworded); 1 description added where upstream had none; the organisation placeholder has been made dynamic; the elapsed-time scale follows CEM v3.1 revision 5 with seven options (AS41's estimate is labelled ≤ three months); the first stakeholder and the stakeholder names of 16 assumptions are the organisation placeholder. Restored as framework bindings: the attack-step mappings to the CRA (24 attack steps, 33 letters). The help texts of the personal-data questions QI2 and QI11 are filed under the option each explains (only their keys moved). The lowest risk level is renamed 'Negligible' (formerly 'No Risk').
Warranty: Unless required by applicable law or agreed to in writing, the licensor provides the work "as is", without warranties of any kind.
